

Submission guidelines: Socket programming

1. You are required to submit the source code of the solvers you wrote for both questions.
2. The solution to each question should be in a separate folder. See below for the directory structure.
3. The solution folders of both questions must contain a run.sh file which should compile the source code(if needed) and run the resulting program as per the specifications in the questions.
4. The solution folders of both questions must contain a README file, where you document which programming language you used and any additional information necessary to run the program.
5. All solution folders must be contained in a folder with same name as your roll number.

The directory structure of roll number p2csn14004 will be similar to the following:

```
$ tree p2csn14004
```

```
p2csn14004
```

```
|__ 1
|   |__ README.txt
|   |__ run.sh
|   |__ <other source files>
|__ 2
|   |__ README.txt
|   |__ run.sh
|   |__ <other source files>
```

6. Compress the top level folder(eg: p2csn14004 in above case) as a tar archive and upload it in Autolab as the solution to the assignment.
7. By submitting the solution to this assignment, you agree that you have read this submission guidelines, understood them correctly and that the work is your own and not plagiarized from any other source. If plagiarism instances are discovered later, appropriate actions will be taken(including but not limited to 0 grade for the entire assignment). Discussing with others is acceptable and encouraged. Copying, plagiarizing, sharing source code etc is not. If you plagiarize solutions, you miss a golden opportunity to learn on your own. Just don't do that to yourself. It is ethically wrong and renders your education pointless.
8. If you have any questions, contact the instructor.
